

ENVIRONAMICS

THE FIRST CHOICE IN CREATING DYNAMIC OFFICE ENVIRONMENTS

SYMBIO™ MOVABLE WALLS

ARCHITECTURE/SLIM-LINE GLAZED FAÇADES

The New York City offices of an international bank achieve a sense of openness and light which allows the magnificent views to be enjoyed throughout the space. This project utilizes sliding rift-cut white oak veneer doors with architectural door pulls. Full height glazed panels with an applied film detail are installed on a slender-profile aluminum track to eliminate the need for base trim.

SYMBIO™ – a response to the elements that shape design.

ARCHITECTURE/BUTT-GLAZED FAÇADES

The offices of a large international foundation. The project features clear butt-glazed panels, 4" aluminum base trim and hinged full-height wood veneer doors. The door finish is quartered maple to match the furniture finish. The base trim and aluminum finish is "AC" Anodized Clear. Wide aluminum spacers are used at the end of GWB office dividing walls. The standard cylindrical locksets and the door hooks in satin chrome finish were chosen by the customer. Many hardware options are available.

SYMBIO™ – a evolution in movable walls.

ARCHITECTURE/DOOR & PANEL OPTIONS

The offices of a mid-size design firm. The project features wood veneer doors and panel inserts in Light Brown Walnut, and both clear and acid-etched glazing. Also featured are several door types - including a frameless glass hinged door, a sliding aluminum and glass door, and a narrow-stile hinged aluminum and glass door. Some panels are covered in a writable dry-erase finish. Architectural electrical devices are installed in SYMBIO™ Connectors at convenient locations.

OUR COMPANY

Environamics Incorporated is an interior specialty contracting company that also fabricates and installs floor to ceiling movable partition systems. Environamics Inc. was founded in 1980 and is owned /managed by individuals thoroughly involved in its day-to-day operations. Charlotte, North Carolina is the headquarters for our company; all accounting/fabricating functions take place here. Branch offices are located in Raleigh, North Carolina, and in Lorton, Virginia. Our northern Virginia office has concentrated its business activities on furnishing and installing movable partition systems; and interior upfitting of many of our government buildings in the Washington, D.C. area, i.e. DOT, FCC, FAA, etc. In addition, our market managers are available to service clients throughout other regions and international locations.

OUR COMMITMENT TO SUSTAINABILITY

Environamics, Inc. is committed to doing our part in maintaining and improving the quality of the natural environment for all future generations to share and enjoy through the implementation of sustainable design and manufacturing processes. The original Gypsum Wall movable system was eco friendly before 'green' building became popular. The ability to relocate entire walls and reconfigure office space creates a tremendous value to environmentally conscious customers who are also concerned about return on their investment of capital (ROI) for their facilities. Many improvements such as utilizing low VOC (volatile organic compound) adhesives and materials have been incorporated over the years. New product and product lines have been developed with the environment in mind. Recyclability of product that has reached its useful life has always been an advantage of all the wall systems we manufacture. There are many benefits in choosing SYMBIO™ over conventional construction including potential LEED certification points.
